

Here's what our patients are saying...

"I will add to the consensus that if you want a place to start, Dr. Gemoules is your best shot at diagnosing and designing a contact lens remedy for you. He is just simply at the forefront of investigating and treating these issues we face, and I hope he continues to forge forward in this area. Your own path might lead to further refinements and discoveries down the road, through Dr. Gemoules or elsewhere, but I truly believe there's no better place to start than Coppell, Texas."

- Brian, Oregon

"Well, comfort to me is the beauty of the lens and Dr. Gemoules' fitting techniques...And I'm talking comfort while in the following circumstances: bike races while going 30 mph shoulder-to-shoulder with a pack of 100 cyclists; bike races in high temperatures with sweat dripping down my face into my eyes; cleaning my garage (dusty!); doing yardwork; etc. 95%+ of my 'nighttime/dim light effects' are fixed with this lens. No starbursts at all, which is amazing. Every person's situation is different, but I'd recommend contacting Dr. Gemoules to see if an appointment with him would be appropriate for your situation. For me, the visit to Dallas was most certainly worth it."

- Mitch, Virginia

"I've just came back from Dallas, where I met Dr. Gemoules for a fitting in order to solve my Higher Order Aberration issues and also recover a good visual acuity. In only two days, Dr. Gemoules has succeeded in providing me an excellent vision, night and day, with very good contrast. I'm very happy. Moreover, the comfort of these lenses is unbelievable; I can barely feel them on my eyes, so I can wear them about 14 hours a day!"

- Raphael, Paris, France

"After suffering from LASIK surgery that went horribly wrong, I saw double, experienced halos, and every kind of aberration. It was impossible for me to function. The prospect of distorted vision for the rest of my life was more than I could handle.

Then I discovered Dr. Gemoules, a compassionate and knowledgeable physician who was dedicated to restoring good eyesight to people in my condition. Every day for a week, he examined and fit me with GP lenses and eye glasses. He kindly worked with me to obtain the optimal results. The halos and aberrations have disappeared and I can see clearly through the contacts and eyeglasses that he prescribed."

- John, Oklahoma

"My eye nightmare began 12 years ago when I had PRK in Stuttgart, Germany. I tried about ten pairs of normal RGPs. Scleral Lenses with two different specialists in London. Mini Sclerals in Holland. I had several wavefront PRKs done in London to reduce the irregularities. This was successful in a way in that after every operation I felt a bit better, however it wasn't enough. Not wanting to risk any more since my corneas were getting too thin I heard of Dr. Gemoules on lasermeye.org. And the great news is that they really help. The comfort is amazing. They have reduced my higher order aberration by 75% resulting in no more spasms! I can wear them the whole day and my eyes aren't red. The vision is very good. I can not tell you how much I'm grateful to Dr. Gemoules."

- Marc, Paris, France

Our Patients Say . . .

“Dr. Gemoules' close proximity to the lens manufacturing labs and established working relationships with the technicians cannot be understated. This situation is extremely unique and virtually impossible to replicate elsewhere. I don't think another lens fitter can come close to this degree of efficiency. Dr. Gemoules' fantastic experience, knowledge, and care are the icing on the cake, in my opinion. I trusted this before the visit, and I enjoy the benefits of it after the trip.”

- Shawn, Washington

“In 1998 I had LASIK. My recovery was not smooth. I saw multiple images. Headlights looked like a fuzzy ball with four fuzzy balls around it and a halo around the whole thing. Dr. Gemoules fit me with RGP lenses that allow me to see so much better, it's startling. I can appreciate detail like I've not been able to in eight years. My lenses were comfortable from day one and the vision. . . it's unreal. All these wasted years. Dr. Gemoules is a true expert, and I've known a lot of experts in my time. He knows his stuff and I'm very glad to be his patient.”
